

Flight Simulation Australia

A support base for Australian virtual pilots

2 June 2021

This website is dedicated to both those who are recent adopters of flight simulation as a hobby, and long-time simmers.

Further revisions have been made to the site to support a change in direction. A previous aim was to provide up-to-date news on the latest product releases by developers and retail outlets. This has been a huge demand on time and I wasn't able to meet the objective. Further, there are ample sites and YouTube channels out there that perform this task admirably.

The Homepage in future will therefore point you in the direction of sites that provide relevant information and news on the flight simulation community developments.

When particular articles of interest or breaking news do emerge, links to them will be made on the Homepage.

There is a considerable number of resources available on this site covering a wide range of flight sim topics. A Homepage 'Resource of the Week' and 'Website of the Week' will be showcased to draw attention to additional areas of interest and support.

Greg Whiley (CaptAus)

Now I hope this doesn't get too confusing, but there are now two organisations in the flight sim community with the abbreviation of FSA. Flight Simulation Australia (FSA) welcomes and endorses the creation of Flight Simulation Association (FSA).

[Flight Simulation Association](#) (FSA) is a relatively new organisation, established by two key organisers of the successful US FSExpo. It aims to be a "launching pad" for those new to the hobby, while offering experienced simmers additional ways to connect and engage within the community.

The showcase website this week is the [Aus Flight Simmer](#) YouTube channel. This channel has a distinctive Australian appeal. It is for the everyday simmer here you can fly, create and be entertained. Weekly content includes: first look reviews, top 5 videos on aircraft, sceneries and utilities for all different types of flight simulators including MSFS, Prepar3D and X-Plane. There is also streaming of regular events. Worth a look and subscribing to.

Changes to the website have been made primarily in two places - the Homepage and the Resource Library.

As you can see, the Homepage now has a different focus. Rather than being a source of the latest development releases, it will in future provide links to topics of interest both inside and outside this site. The Resource Library, particularly the Resources column, has been revamped with a number of the information pages being condensed into one: Flight Simulation Websites.

A further change being considered, is the expansion of the current register for cockpit builders to include the ability of all flight simmers to register for inclusion. Watch this space for further developments.

This week's resource of the week is a detailed and instructive article on how to configure the Honeycomb yoke and throttle quadrant with Microsoft Flight Simulator (MSFS)
